Art Unit: 1700

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-2, 9-11 are rejected on the ground of nonstatutory obviousness-type

double patenting as being unpatentable over claims 1-6, 11-13 of U.S. Patent No.

6,878,775. Although the conflicting claims are not identical, they are not patentably

distinct from each other because claims a pressure sensitive adhesive tape and

composition comprising a polyarylate which can be crosslinked, (see claim 5 of US '775)

and which has a volatiles content of less than 50 ug/g, 10 ug/g and 5 ug/g..

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-2, 9-11 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Husemann et al, U.S. Patent No. 6,878,775. Husemann et al discloses a pressure sensitive adhesive composition based on acrylic acid and/or methacrylic acid and/or derivatives thereof which can be coordinatively crosslinked and which has an outgassing tendency of less than 10ug/g as measured by the tesa method as well as a single or double sided tape comprising the adhesive composition on a substrate. See abstract, col. 2, lines 47-67; col. 7, lines 7-20.
5. Process claims 3, 5-8, 12-13 are allowed in view of the Board Decision dated 2/4/08. Husemann does not teach, suggest or render obvious the process claims since Husemann teaches away from UV crosslinking and does not teach the claimed method step of UV crosslinking.
